

# Anti-solder lubricants

Product	Typical applications	Lubricant	Example
<b>BONDERITE L-CA HSL 111</b> Formerly Deltacast HSL 111	An anti-solder lubricant paste for use on the parts of dies liable to chemical aggression from the aluminium during die-casting. Particularly suitable for reducing, containing or removing solder formation, eliminating the need to dismantle the die, which would mean the loss of production.	Graphite	 A photograph showing a die casting die with a red arrow pointing to a white, crystalline deposit (solder formation) on the die surface.
<b>BONDERITE L-CA C412</b> Formerly Deltacast C-412	A coating repair paste with anti-solder properties used both for the cold start-up of dies and as an anti-solder product in case of aluminium deposits. It contains graphite and aluminium pigments, which makes C-412 an excellent product, leaving very little residue on pieces and allowing fast production start-up.	Graphite and aluminium	 A photograph showing a thick, grey, paste-like substance (anti-solder paste) being applied to a metal surface.
